📇 PROFILE

I have 1.6 years of experience as an Associate Site Reliability Engineer. worked with many teams with an average size of 10+ on maintaining 500+ servers, addressing Linux problems, executing system recovery, managing incidents, and maintaining services 24/7.

💼 PROFESSIONAL EXPERIENCE

2021-07 – present
Mumbai, India

Gupshup Technology, *Associate Site Reliability Engineer* ⧉
- Architected and control a variety of infrastructure monitoring tools, namely Manage Engine, Icinga, Zabbix, Observium, Grafana.
- Investigated the incident, follow up on it, and fixed it within the SLA and minimize the impact on the business.
- Accomplished to resolved a 50+ number of recurring issues, which including database outages due to memory issues and application slowdown due to high CPU usage.
- Expertise in filesystem and protocols: HTTPS, NFS, SMB, NTP, SAMBA, SSH, TCP, SSL And have inlined experience in networking.
- Created 50+ automation scripts to improve productivity and permanently fix the problem, like everyday ad hoc manual tasks.
- Contributed in the implementation of several infrastructure technologies for reliable and accurate monitoring, such as "Manage Engine for Application Monitoring".
- Effectively responded to email requests, 10+ incident tickets, monitoring alerts that the site reliability engineering team receives every day.
- Implemented 20+ NFS backup servers to backup data and carry out disaster recovery procedures.
- Improved system architecture, such as spinning 20+ EC2 instances with associated EFS for application deployment.
- Deployed application such as Tomcat, Redis, Rabbit MQ, MySQL on 500+ servers to meet functional needs.

🧠 SKILLS

Cloud　●●●●○
IAM, EC2 instances, ALB, EBS, EFS, RDS, S3, Cloud Trail, Cloud watch, Route 53, SG , VPC and auto scaling on AWS

Devops　●●●○○
Automation Cronjobs, Ansible, Git, Terraform, Jenkins , CI/CD, Docker Configuration And Project Management, Atlassian stack

Linux　●●●●○
Boot Process, Partition Management, Unix File System, , File Permissions, Process & Daemons, Archive compression, Logs Management, User Administration, Application Configuration, Package Installation, Load Balancer, HA-Proxy, NFS, FTP, DNS, Vmware ESXi

Scripting and Automation　●●●●○
Python, Shell Scripting

🎓 EDUCATION

2017 – 2020 Mumbai, India	**Xavier Institute of Technology,** *Bachelor of Technology* ⧉ Information Technology Engineering

🗀 PROJECTS

2019 – 2020

Chit-Fund Application using block-chain, *Make your bid with transparency*
- Digitalization and the development of new information technology is one of the strongest forces of change in society.
- The users will have complete transparency while bidding through the web application.

2018 – 2018

Online Payment Website, *Make your bill payment digitally*
- The website application that enables consumers to pay for their electricity bills more conveniently.

2018 – 2018

Smart Security System, *Secure your place with IoT*
- The following project was developed using cutting-edge modern technologies, including the Internet of Things.
- Multiple sensors and an LED display are included in the project.
- Customers can utilise this anywhere they choose, including their homes, offices, gardens, and retail spaces.
